Coding Shuttle

Profile

Java Backend Developer with **2.5 years of experience** building **scalable microservices and RESTful APIs** using **Java, Spring Boot, Hibernate, and SQL**. Experienced in **fintech and ERP platforms**, specializing in **microservices architecture, backend performance optimization, and clean code practices**. Strong background in **database query optimization, API integration, and system reliability**. Proficient in **Git, JIRA, Docker, and Postman** for **version control, issue tracking, containerized deployments, and API testing**.

Skills

Programming Languages :
Java 8/11 (OOP, DSA, JDBC), SQL, Kotlin, HTML, CSS, JavaScript, Bash

Databases & Message Broker:
MySQL, PostgreSQL, Redis, PgAdmin, Kafka, RabbitMQ, Redis

CI/CD,Version Control Tool & IDEs:
Git, GitHub, Bitbucket, VS Code, Intellij, Postman, Jira, Swagger, ELK Stack

Backend :
RESTful API Design, Kafka Event Streaming (Producer/ Consumer, Topics, Broker Configuration), CRUD Operations, Exception Handling, Data Validation

Frameworks & Libraries:
Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring AOP, Spring AI, Spring Cloud, Eureka Service Discovery, Config Server, API Gateway, React (Basic)

Build Tools & API Testing:
Maven, Gradle, Postman (100+ API tests), JUnit (Unit & Integration), Custom Exception Handlers

Platforms:
AWS, Firebase, AWS S3, Firebase Auth, Auth0, Cloudflare

Professional Experience

Software Developer, ESthenos Technologies Pvt. Ltd. Jan 2024 – Present
Project: Loan Management System (LMS) Bengaluru

- Contributed to the development of **LMS modules on the Mifos platform**, enabling **end-to-end loan lifecycle management** including onboarding, approval, disbursement, and repayments.
- Developed **Spring Boot REST APIs** for loan disbursement, repayment processing, and loan portfolio management.
- Improved **MySQL 5.7 database performance** using **optimized SQL queries, indexing strategies, and table partitioning** to enhance query execution speed.
- Implemented **automated PDF reporting** using **iText**, generating loan statements, repayment schedules, and portfolio reports for operational insights.
- Collaborated in an **Agile development environment**, managing code through **GitHub**, tracking tasks via **JIRA**, and performing debugging and backend performance improvements.

Java Developer, BridgeLabz Jun 2023 – Dec 2023
Bengaluru

- Built and deployed a **Student Study Loan Management System** using **Java, Spring Boot, and REST APIs**, automating loan processing and tracking for education financing platforms.
- Integrated **Auxilo third-party APIs** to automate **loan approval, disbursement, and real-time status updates**, improving system reliability and reducing manual operations.
- Developed a **Loan Repayment Schedule engine** to dynamically generate **EMI plans, interest breakdowns, and repayment timelines**.
- Implemented **Spring Security authentication and RBAC authorization**, securing access for **Admin, Staff, and Customer** roles.
- Optimized **MySQL schema design and query performance**, improving backend response time and workflow efficiency by **60%**.
- Participated in **agile development**, collaborating with frontend teams, conducting **code reviews, debugging, and performance tuning** to ensure scalable microservice deployment.

Projects

Matrix, AI Code Generation Agent — Jan 2026 – Present

- Designed and developed an **AI-powered Code Generation Agent** using **Spring AI** to automatically generate structured application code from natural language prompts.
- Implemented **advanced prompt engineering and tool-calling mechanisms** to transmit project file tree structures to the LLM, enabling **context-aware code generation**.
- Built **validation pipelines and custom rules** to enforce standardized LLM output formats, using **regex-based parsing** for response validation and processing.
- Implemented **Retrieval-Augmented Generation (RAG)** with a **Vector Database** to perform semantic search across project documentation, templates, and coding rules, improving generated code accuracy and relevance.
- Automated **project scaffolding and source file generation**, dynamically creating directories and application files based on LLM responses.
- Integrated **MinIO object storage** for secure storage and management of generated source code and project assets.
- Implemented **JWT-based authentication and role-based authorization** using **Spring Security** to manage **Owner, Editor, and Viewer** access permissions.
- Leveraged **Spring AOP** for centralized **logging and monitoring** of LLM interactions, tool calls, and system events.
- Designed **PostgreSQL database schemas** to manage user data, project metadata, and code generation history.
- Containerized generated applications using **Docker**, enabling automated build and preview environments for generated projects.

Education

B.Tech, Government College of Engineering , Bhawanipatana

2019 – 2023 | Bhawanipatana
